THIS IS NOT A FREE FONT

Bulles is distributed with a **free for personal / non commercial use license** provided with the download. It allows unlimited use of the font(s) on all personal CPUs for **non-commercial uses** (i.e. no-profit projects, student work, pro-bono assignments).

If you're designing a logo or artwork for print or digital advertising, and are the sole author of the design you need to buy a **Personal License**.

If you're designing a logo or artwork for print or digital advertising, and are part of a two-five people studio you need the **Small Studio License**.

Both the personal and small studio licenses apply to web/app use of your design, as long as it stays in rasterized form; if you plan to use include the font in a website or in an app for dynamic text generation (e.g. font-face) you need the **Software/Internet License**.

All the above licenses don't apply to broadcast use (designing logos or dynamic text for broadcast/tv/cinema).

If you plan to use include the font as part of dynamic or static typesetting for broadcast use, you need the **Broadcast License**.

All the above licenses don't allow for redistribution of the font to your client or his employees (eg. corporate font usage). If you want your client to be able to use personally the font to adapt/modify your design, he must buy a Personal or Small Business License.

If your client is a corporate entity that wants to freely distribute the font to employees and agencies for brand/product development, a **Worldwide License** is necessary.

Feel free to contact us for further enquiries.

About Bulleto Font

WHO DID IT?

Bulleto was designed by Cosimo Lorenzo Pancini at Zetafonts, developing the original **Digitalino** font by Francesco Canovaro.

DESIGN STYLE

Bulleto was designed to maximize legibility in bold italic characters.

Readable Script

To add a script flavour, all uppercase letters have a small swash with a round ball terminal.

A B E F W

TYPE FREELY IN ALL-UPPERCASE

To avoid clashes between letters in all-uppercase words, a secondary set of uppercase was designed:

THIS LOOKS BAD
THIS LOOKS GOOD

This effect is obtained by open type substitution and can be disabled by switching off standard ligatures.

FINAL FORMS AND SWASHES

A set of final forms for lowercases and some swash ended where added.

To obtain the final form, allow opentype final form alternates or simply type two hyphens after the letter:

type **nice--** get **nice**

type **way--** get **way**

type **cat--** get **cat**

Similarly, type underscores after the last letter to get swash endings:

type **Fun__** get **Fun**

type **Eva_** get **Eva**

type **Bat___** get **Bat**

Monoline version has different swashes:

type **Aria__** get **Aria**

type **Fun_** get **Fun**

type **Sea___** get **Sea**

Bulletto

Slang names for Italians:

Goombah: From the Italian word "Compare" (pronounced 'cumpa') meaning "a close friend." Considered a slur when used by non-Italians to describe an Italian male. Was first used by Louis Prima who was famous for bastardizing the Italian language in his witty songs for his American audience. The Goomba is also the weakest enemy in Nintendo's Super Mario Bros. video game series.

Guinea/Ginney: Pronounced "gi-nee." Came from "Guinea Negro" and originally referred to any Black or any person of mixed ancestry. This dates back to the 1740's. By the 1890s it was being applied to Italians almost certainly because they tend to have darker skin than Anglo-Saxons/Germans. By 1911 the term began being applied to Hispanics, although the reference to Italians is the most common. Derived from Sicilian immigrants who paid in Italian currency, Guineas. Used in the film 'True Romance' as separate from WOPs from Northern Italy, and in The Godfather by a Northern Italian character when referring to Southern
